## **RUKUN NEGARA**

BAHAWASANYA Negara kita Malaysia mendukung cita-cita hendak:  
Mencapai perpaduan yang lebih erat dalam kalangan seluruh masyarakatnya;  
Memelihara satu cara hidup demokratik;  
Mencipta satu masyarakat yang adil di mana kemakmuran negara  
akan dapat dinikmati bersama secara adil dan saksama;  
Menjamin satu cara hidup yang liberal terhadap tradisi-tradisi  
kebudayaannya yang kaya dan berbagai corak;  
Membina satu masyarakat progresif yang akan menggunakan  
sains dan teknologi moden;

MAKA KAMI, rakyat Malaysia, berikrar akan menumpukan seluruh tenaga dan usaha kami untuk mencapai cita-cita tersebut berdasarkan atas prinsip-prinsip yang berikut:

**KEPERCAYAAN KEPADA TUHAN  
KESETIAAN KEPADA RAJA DAN NEGARA  
KELUHURAN PERLEMBAGAAN  
KEDAULATAN UNDANG-UNDANG  
KESOPANAN DAN KESUSILAAN**

## **FALSAFAH PENDIDIKAN KEBANGSAAN**

“Pendidikan di Malaysia adalah suatu usaha berterusan ke arah lebih memperkembangkan potensi individu secara menyeluruh dan bersepadu untuk melahirkan insan yang seimbang dan harmonis dari segi intelek, rohani, emosi dan jasmani, berdasarkan kepercayaan dan kepatuhan kepada Tuhan. Usaha ini adalah bertujuan untuk melahirkan warganegara Malaysia yang berilmu pengetahuan, berketerampilan, berakhlak mulia, bertanggungjawab dan berkeupayaan mencapai kesejahteraan diri serta memberikan sumbangan terhadap keharmonian dan kemakmuran keluarga, masyarakat dan negara”

Sumber: Akta Pendidikan 1996 (Akta 550)

## DEFINISI KURIKULUM KEBANGSAAN

### 3. Kurikulum Kebangsaan

(1) Kurikulum Kebangsaan ialah suatu program pendidikan yang termasuk kurikulum dan kegiatan kokurikulum yang merangkumi semua pengetahuan, kemahiran, norma, nilai, unsur kebudayaan dan kepercayaan untuk membantu perkembangan seseorang murid dengan sepenuhnya dari segi jasmani, rohani, mental dan emosi serta untuk menanam dan mempertingkatkan nilai moral yang diingini dan untuk menyampaikan pengetahuan.

Sumber: Peraturan-Peraturan Pendidikan (Kurikulum Kebangsaan) 1997

[PU(A)531/97.]

## **KATA PENGANTAR**

Kurikulum Standard Sekolah Rendah (KSSR) yang dilaksanakan secara berperingkat mulai tahun 2011 telah disemak semula bagi memenuhi dasar baharu di bawah Pelan Pembangunan Pendidikan Malaysia (PPPM) 2013-2025 supaya kualiti kurikulum yang dilaksanakan di sekolah rendah setanding dengan standard antarabangsa. Kurikulum berasaskan standard yang menjadi amalan antarabangsa telah dijelmakan dalam KSSR menerusi penggubalan Dokumen Standard Kurikulum dan Pentaksiran (DSKP) untuk semua mata pelajaran yang mengandungi Standard Kandungan, Standard Pembelajaran dan Standard Prestasi.

Usaha memasukkan standard pentaksiran di dalam dokumen kurikulum telah mengubah lanskap sejarah sejak Kurikulum Kebangsaan dilaksanakan di bawah Sistem Pendidikan Kebangsaan. Menerusinya murid dapat ditaksir secara berterusan untuk mengenal pasti tahap penguasaannya dalam sesuatu mata pelajaran, serta membolehkan guru membuat tindakan susulan bagi mempertingkatkan pencapaian murid.

DSKP yang dihasilkan juga telah menyepadukan enam tunjang Kerangka KSSR, mengintegrasikan pengetahuan, kemahiran dan nilai, serta memasukkan secara eksplisit Kemahiran Abad Ke-21 dan Kemahiran Berfikir Aras Tinggi (KBAT).

Penyepaduan tersebut dilakukan untuk melahirkan insan seimbang dan harmonis dari segi intelek, rohani, emosi dan jasmani sebagaimana tuntutan Falsafah Pendidikan Kebangsaan.

Bagi menjayakan pelaksanaan KSSR, pengajaran dan pembelajaran guru perlu memberi penekanan kepada KBAT dengan memberi fokus kepada pendekatan Pembelajaran Berasaskan Inkuiri dan Pembelajaran Berasaskan Projek, supaya murid dapat menguasai kemahiran yang diperlukan dalam abad ke-21.

Kementerian Pendidikan Malaysia merakamkan setinggi-tinggi penghargaan dan ucapan terima kasih kepada semua pihak yang terlibat dalam penggubalan KSSR. Semoga pelaksanaan KSSR akan mencapai hasrat dan matlamat Sistem Pendidikan Kebangsaan.

## INTRODUCTION

Mathematics is a core subject in the Standard-Based Curriculum for Primary School that must be learnt by all pupils who are following the National Education System. Every pupil in Malaysia has the opportunity to pursue at least six years of basic education in primary school.

Mathematics at primary schools provides opportunities for pupils to carry out fun, meaningful, useful and challenging tasks as well as to increase their inquisitiveness in learning mathematics. Such experiences increase interest and motivate pupils to learn mathematics and apply the knowledge in their daily life.

Mathematics Standard-Based Curriculum for Primary School has been revised and reorganised taking into consideration the continuity to the next level. The steps taken are in line with the need to provide mathematical knowledge, skills and values for pupils from various backgrounds and abilities. Benchmarking of the mathematics curriculum was conducted with high achieving countries at the international assessment level to ensure that the Mathematics curriculum in Malaysia is relevant to and on par with other countries in the world.

Due to its natural properties that encourage logical and systematic thinking, Mathematics is the best medium to develop the potential and intellectual proficiency of individual and human development. Thus, other than the needs of developing our country, the development of the Mathematics Standard-Based Curriculum for primary school also takes into account the factors which enhance the development of individuals who are logical, critical, analytical, creative and innovative thinkers. This step is consistent with the need to provide adequate knowledge and mathematical skills to ensure the country is able to compete globally and meet the challenges of the 21st century. The various background and abilities of pupils are given specific attention in order to ensure the knowledge and skills learnt in this subject.

**AIMS**

The aim of the Mathematics Standard-Based Curriculum for Primary School is to develop pupils who are mathematically inclined with the understanding of the concept of numbers, basic calculation skills, simple mathematical ideas and competency in applying mathematical knowledge and skills effectively and responsibly, to solve problems and make decisions in compliance with attitudes and values to overcome challenges faced in daily life, conforming with development in science and technology and the 21st century challenges.

**OBJECTIVES**

The Mathematics Standard-Based Curriculum for Primary School aims to enable pupils to achieve the following objectives:

1. Develop mathematical thoughtful learning.
2. Develop understanding and apply the concepts and mathematical skills in various contexts.
3. Expand the use of basic operation skills; addition, subtraction, multiplication and division related to Numbers and Operations, Measurement and Geometry, Relationship and Algebra, and Statistics and Probability.
4. Identify and use relationships in mathematical ideas, between the field of mathematics and other fields and with daily life.
5. Communicate clearly using mathematical ideas and use symbols and terms correctly;
6. Use mathematical knowledge and skills in problem solving and make adjustments to various strategies in solving problems;
7. Develop higher order thinking, critical thinking, creative thinking, innovative thinking, reasoning and explore daily life mathematically.
8. Use various representations to present mathematical ideas and relationships.
9. Appreciate and value the beauty of mathematics.
10. Use various mathematical tools effectively including ICT to build conceptual understanding and apply mathematical knowledge.

## THE FRAMEWORK OF STANDARD-BASED CURRICULUM FOR PRIMARY SCHOOL

KSSR Framework is built on the basis of six fundamental strands: Communication, Spirituality, Attitudes and Values, Humanities, Personal Competence, Physical Development and Aesthetics and Science and Technology. These six strands are the main domain that support one another and are integrated with critical, creative and innovative thinking.

The integration aims to produce human capital who appreciate values based on spirituality, knowledge, personal competence, critical and creative thinking as well as innovative thinking as shown in Figure 1. The Mathematics curriculum is developed based on the six strands of the KSSR Framework.

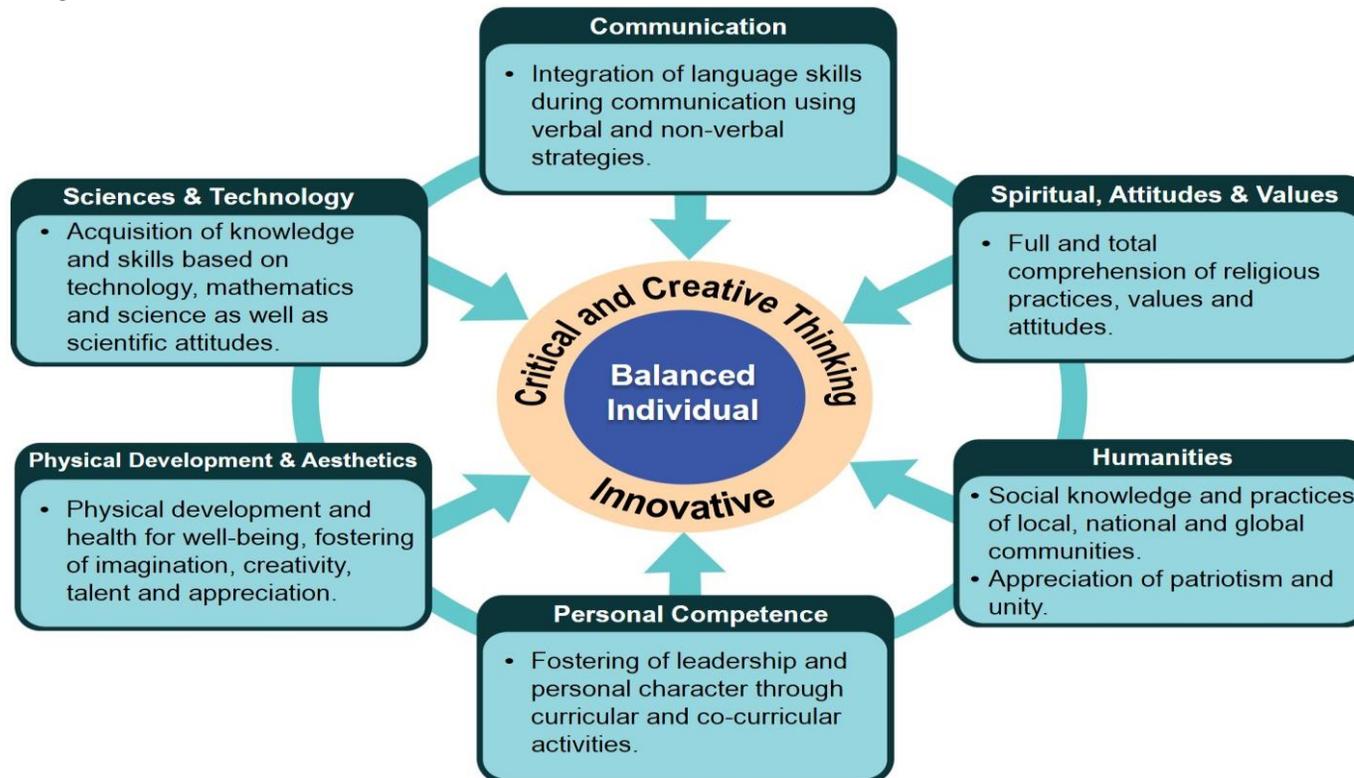

Figure 1: The Framework for Primary School Standard-Based Curriculum

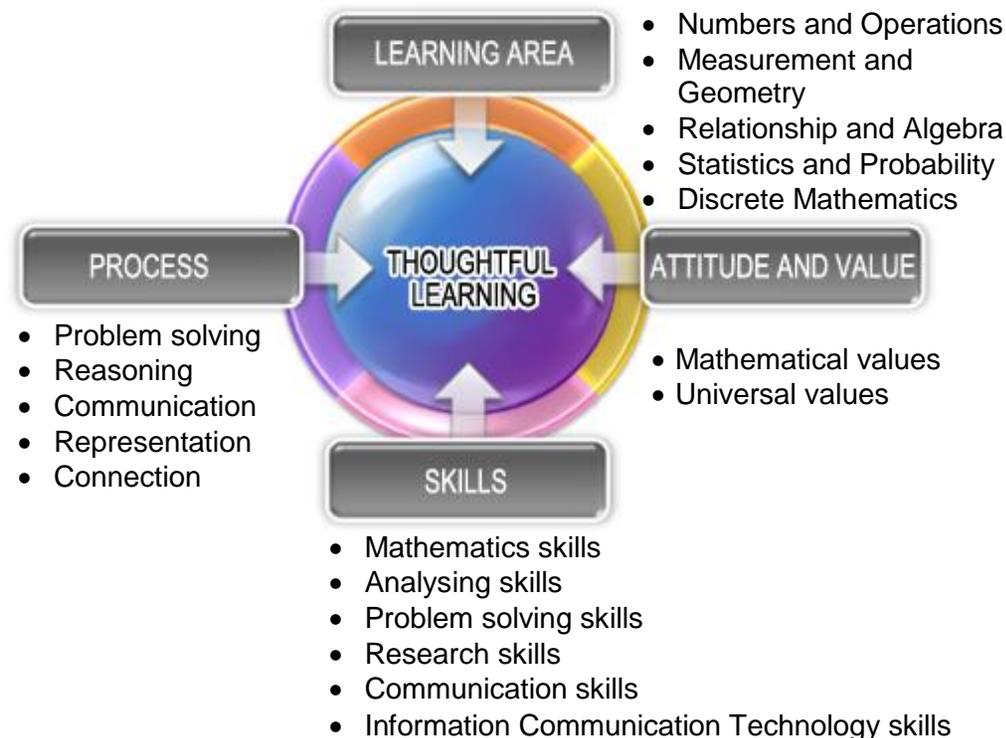

## FOCUS

The Mathematics Standard-Based Curriculum for Primary School focuses on the mastery of knowledge and understanding to enable pupils to apply concepts, principles and the mathematical processes learnt.

Emphasis on the development of pupils' mathematical thinking is constructed and developed through the teaching and learning in the classroom which is based on the principles of problem solving, communication, reasoning, relationship, making representations and using of technology in mathematics.

The Mathematics curriculum framework in Figure 2, is an important fundamental aspect in designing the Mathematics curriculum in the classroom. The four important elements that contribute to the mathematical thoughtful learning in human development are:

1. Learning Area;
2. Attitude and Value;
3. Mathematical Skills; and
4. Mathematical Process.

**Figure 2 : The Mathematics Curriculum Framework for Primary School**

### Mathematical Thoughtful Learning

Thoughtful learning has the same meaning as the ability to think and create thoughts. In the context of mathematics education, thoughtful learning refers to the desired quality of pupils to be produced through the national mathematics education system. Pupils who are mathematically inclined are those who are capable of doing mathematics and understanding the mathematical ideas and responsibly applying the mathematical knowledge and skills in daily life based on attitudes and values of mathematics.

Mathematics thoughtful learning aims to produce creative and innovative individuals as well as fulfil the requirements of the 21st century as the nation's capability depends on human capital that is able to think and generate ideas.

### Learning Area

The Mathematics Curriculum encompasses five learning areas:

- Numbers and Operations;
- Measurement and Geometry;
- Relationship and Algebra;
- Statistics and Probability; and
- Discrete Mathematics (Will be learnt in Secondary School)

### Mathematical Process

Mathematical processes that support the effective and thoughtful learning of mathematics are:

- Problem Solving;
- Reasoning;
- Communication in mathematics;
- Connection; and
- Representation

These five mathematical processes are interrelated and need to be integrately implemented across the curriculum.

**Problem solving** is the main focus in the teaching and learning of mathematics. Thus, teaching and learning need to involve problem solving skills comprehensively and across the whole curriculum. The development of problem solving skills needs to be given proper emphasis so that pupils are able to solve various problems effectively. These skills involve the following steps:

- (i) Understand and interpret problems;
- (ii) Plan solution strategies
- (iii) Implement strategies; and
- (iv) Review answers.

The various uses of general strategies in problem solving, including the steps in solving problems, need to be expanded. Some of the common strategies are drawing diagrams, identifying patterns, constructing charts and tables or listing systematically; using algebra, trying simpler cases, logical reasoning, trial and error, working backwards and using analogy.

Reviewing answers is an important step in problem solving. Pupils should be trained to review answers. By reviewing the answers, pupils see, understand and appreciate the perspective of mathematics from different angles as well as consolidate their understanding of a concept learnt.

**Reasoning** is fundamental to comprehending mathematics effectively and having meaningful understanding of mathematics. The development of mathematical reasoning is closely related to the intellectual development and communication of pupils. Reasoning is able to expand not only the capacity of logical thinking but also increase the capacity of critical thinking, which is the basis of understanding mathematics in depth and meaningfully. To achieve this objective, pupils should be trained and guided to make a conjecture, prove the conjecture, provide logical explanation,

analyse, consider, evaluate, and justify all mathematics activities. In addition, teachers need to provide space and opportunities for discussion of mathematics which is not only engaging but also allow each pupil to involve actively.

Reasoning can be done inductively through mathematical activities that involve the identification of patterns and make conclusions based on the patterns.

The element of reasoning in teaching and learning prevents pupils from assuming mathematics as only a set of procedures or algorithms that need to be followed to get a solution, without actually understanding the true concepts of mathematics. Reasoning does not only change the pupils' paradigm from just learning to thinking, but also gives intellectual empowerment when pupils are trained and guided to make a conjecture, prove the conjecture, provide logical explanation, analyse, evaluate and give justification to all mathematics activities. This training will produce pupils who are self-confident and resilient in line with the aspiration to mould mathematical thinkers with high capabilities.

**Mathematical Communication** helps pupils to clarify and strengthen their mathematical understanding. By sharing understanding in written and oral mathematics with classmates, teachers and parents, pupils will be able to increase their self-confidence and simplify the teachers' work in monitoring their progress in mathematical skills.

Communication plays a vital role in ensuring meaningful learning of mathematics. Through communication, mathematical ideas can be expressed and understood better. Mathematical communication, whether oral, written, or with the use of symbols and visual representations (using charts, graphs, diagrams etc), enable pupils to understand and apply mathematics effectively.

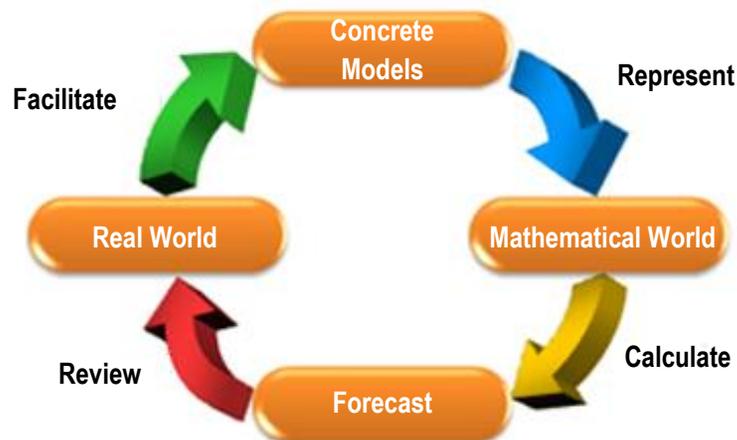

Communicating among themselves or with peers, parents, adults and teachers can help pupils to visualize, clarify and strengthen their ideas and understanding of mathematics. To ensure that the process of generating, sharing and enhancement in understanding, pupils should be given the opportunity to debate their mathematical ideas analytically and systematically. Communication that involves various perspectives and opinions, could help pupils to improve their understanding of mathematics.

An important aspect of effective communication in mathematics is the ability to provide explanation effectively, understand and apply the correct mathematical notation. Pupils need to use mathematical language and symbols correctly to ensure that mathematical ideas can be explained accurately. Mathematical communication also involves the use of various aids such as charts, graphs, manipulatives, calculators, computers and others. Pupils should be able to use these aids to explain mathematical ideas and solve mathematical problems.

Effective communication requires an environment that enable the pupils to feel comfortable when talking, asking and answering questions and giving explanations to classmates and teachers. Pupils should be given opportunities to communicate actively in various situations, for example, communicating during activities in pairs, groups or providing explanation to the entire class.

Assessment of the ability of pupils to communicate effectively in mathematics should show the evidence that they are able to generate, explain and share their mathematical ideas through various forms of communication in various environments. Pupils, who are often given opportunities and encouragement to speak, read, write and listen during the teaching and learning of mathematics will be able to communicate to learn mathematics and learn to communicate mathematically.

**Representation** in mathematics is often used to represent the world that we live in. Therefore, there must be similarities between aspects of the represented world and aspects that are represented by the world. The abstract relationship between these two worlds can be depicted as follows:

**Figure 3: Representation Process**

Representation can be regarded as a facilitator that enables the relationship between the real world and the world of mathematics. Formulas, tables, graphs, equations etc. are used to represent various notions and real world relationships.

Representation can be defined as any configuration of letters, images or concrete objects that can reflect or represent other things. The representation system is naturally divided into internal and external representation. The internal representation system exists in the thinking of the individual, whereas the external representation is easily shared and viewed by others.

Internal representation consists of notions that help in visualizing the human process of learning and solving problems in mathematics, while external representation consists of items such as diagrams, the formal language and notational symbols. Using multiple representations to show a concept not only helps to develop better conceptual understanding but also strengthens pupils' ability in solving problems.

Representation is necessary for pupils' understanding of mathematical concepts and relationships. Representation allows pupils to communicate through approaches, debates and understanding of mathematics to themselves and others. It also allows pupils to recognize the relationships between related concepts and apply mathematics to realistic problems.

Representation is an important component in the development of mathematical understanding and quantitative thinking. As a whole, without representation, mathematics is abstract, mostly philosophical and probably unapproachable by most of the population. With representation, the notion of mathematics can be formed into a model, important relationship can be elaborated, understanding can be stimulated through constructing and sequencing of suitable experiences and observations.

Pupils should generate and explore mathematical ideas in depth through opportunities and various learning experiences. Awareness that mathematical ideas are interrelated and mathematics is comprehensive and not fragmented knowledge should be nurtured and developed among pupils. With that understanding and awareness, the mathematical ideas are more meaningful and thus, can enhance pupils' ability in applying mathematics.

Opportunities and various learning experiences provided should involve pupils actively in learning mathematics, help pupils to form in-depth understanding about mathematical concepts and create meaningful understanding of various mathematical ideas. Based on the understanding and meaning formed, pupils are able to relate and apply mathematical ideas, thus, enabling them to be more confident to explore and apply mathematics. The use of teaching aids, technological tools and implementation of task/practical/project work should be encompassed in learning experiences that are prepared for the pupils.

**Connections** need to be established so that pupils can relate conceptual and procedural knowledge as well as be able to connect topics in mathematics particularly and mathematics with other fields generally. This will enhance the pupils' understanding and make mathematics clearer, meaningful and interesting to them.

Mathematics curriculum generally consists of several discrete areas such as calculation, geometry, algebra, measurement and problem solving. Without relating these areas, pupils will have to learn and remember too many concepts and skills separately. Instead, by recognizing how the concepts or skills in different fields relate to each other, mathematics will be seen and studied as a holistic knowledge discipline and easily understood. When these mathematical ideas are related with everyday experiences inside and outside the school, pupils will be more aware of the usage, importance, strength and the beauty of mathematics.

### Mathematical Process Standard

The standards of process that need to be achieved by the pupils throughout these implementations are as follows:

**Table 1: Mathematical Process Standard**

Problem Solving
<ul style="list-style-type: none"> <li>• Understanding the problem.</li> <li>• Extracting relevant information in the given situation and arranging the information systematically.</li> <li>• Planning various strategies to solve the problem.</li> <li>• Implementing strategies according to the prescribed plan.</li> <li>• Producing solutions which fulfil the requirements of the problem.</li> <li>• Interpreting solutions.</li> <li>• Making reviews and reflections for the solution and strategy used.</li> </ul>
Reasoning
<ul style="list-style-type: none"> <li>• Recognizing reasoning and proof as the basis of mathematics.</li> <li>• Identifying pattern, structure and similarity in real world situation and symbolic representation.</li> <li>• Choosing and using various reasoning and proving methods.</li> <li>• Making, investigating and verifying mathematical conjectures.</li> <li>• Constructing and evaluating mathematical argument and evidence.</li> <li>• Making decisions and justifying them.</li> </ul>

### Mathematical Communication

- Organizing and combining mathematical thoughts through communication to clarify and strengthen mathematical understanding.
- Communicating mathematical thoughts and ideas clearly and confidently.
- Using mathematical language to state mathematical ideas accurately.
- Analysing and evaluating mathematical thoughts and strategies of others.

### Representation

- Describing mathematical ideas using various representations.
- Making interpretation from given representations.
- Choosing suitable representations.
- Using various mathematical representations to:
  - I. simplify complex mathematical ideas.
  - II. help in solving problems.
  - III. make a model and interpret mathematical phenomena.
  - IV. create connection between various representations.

### Connection

- Identifying and using connection between mathematical ideas.
- Understanding how mathematical ideas are interconnected and organised to produce a coherent whole.
- Relating mathematical ideas with daily life and other fields.

### Skills

Mathematical skills should be developed and instilled in the pupils and these skills include numeration, measuring and constructing, handling and interpreting data, manipulating arithmetic, manipulating algebra, using algorithms, using mathematic tools and Information and Communications Technology (ICT).

Skills in mathematics that support effective and thoughtful learning of mathematics are:

- Mathematical skills
- Analysing skills
- Problem solving skills
- Research skills
- Communication skills
- Technology using skills

**Mathematical skills** refer to the following abilities:

- (i) Using correct standard mathematical language and applying logical reasoning.
- (ii) Stating mathematical ideas precisely.
- (iii) Creating, testing, and proving conjecture.
- (iv) Extracting meaning from a mathematical writing.
- (v) Using mathematics to explain the physical world.

**Analysing skills** refer to the following abilities:

- (i) Thinking clearly.
- (ii) Giving attention and examining every aspect.
- (iii) Manipulating precise and detailed ideas.
- (iv) Understanding complex mathematical reasoning.
- (v) Constructing and defending logical arguments.
- (vi) Debating illogical arguments.

**Problem solving skills** refer to the following abilities:

- (i) Constructing problem statements precisely and identifying the main issues.
- (ii) Presenting solutions clearly and stating the assumptions made.
- (iii) Solving complex problems by analysing simpler to specific problems.
- (iv) Being open-minded and using different approaches in solving the same problem.
- (v) Solving problems confidently even though the solution is not clear.
- (vi) Asking for help, if needed.

**Research skills** refer to the following abilities:

- (i) Referring to notes, textbooks and other sources.
- (ii) Accessing books in the library.
- (iii) Using database.
- (iv) Getting information from various individuals.
- (v) Thinking.

**Communication skills** refer to the following abilities:

- (i) Listening effectively.
- (ii) Writing mathematical ideas clearly and precisely.
- (iii) Writing essays and reports; and
- (iv) Doing presentations.

**Technology using skills** refer to the ability in using and handling mathematical tools such as abacuses, calculators, computers, educational software, websites and educational packages for:

- (i) Developing and understanding mathematical concepts in depth.
- (ii) Creating, testing and proving conjectures.
- (iii) Exploring mathematical ideas.
- (iv) Solving problems.

## Attitudes and Values in Mathematics Education

Values are affective qualities instilled through the teaching and learning of mathematics using appropriate contexts. They are taught and learnt implicitly in learning sessions. Good values that are nurtured will eventually produce good attitudes. Inculcating values and attitudes in teaching and learning mathematics aim to produce competent individuals in the aspects of knowledge and skills coherent with virtuous attitudes. Inculcating good values moulds the young generations with noble and virtuous attitudes.

Attitudes and values that can be instilled in pupils through the teaching and learning of mathematics are:

1. Values of mathematics which refer to values in mathematical knowledge which encompasses the emphasis on the characteristics in mathematical knowledge.
2. Attitudes and global values which refer to the practice and global virtuous values which are instilled across all subjects.

The formation of values through teaching and learning mathematics also involves spirituality, beliefs, interests, appreciation, confidence, efficiency and endurance.

Basically, in the power and greatness of God can be nurtured through the contents in this curriculum. The relationship

between the content learnt and the real world is to show and validate the greatness and power of the creator of the universe. Elements of history and patriotism should also be incorporated in appropriate topics to enable pupils to appreciate mathematics and stimulate pupils' interest and confidence in mathematics. These historical elements could be a particular event about a mathematician or a brief history about a concept or symbol are also emphasized in this curriculum.

## 21st CENTURY SKILLS

One of the aspirations in the Standard-Based Curriculum for Primary School is to produce pupils with the 21<sup>st</sup> century skills by focusing on thinking skills as well as living skills and careers that are based on practical moral values. 21<sup>st</sup> century skills aims to produce pupils with the characteristics as stated in the pupils' profile in Table 2, so that they are able to compete globally. The mastering of Content Standard (CS) and Learning Standard (LS) in the primary school mathematics curriculum contributes to the acquisition of 21<sup>st</sup> century skills among pupils.

**Table 2: Pupils' Profile**

PUPILS' PROFILE	DESCRIPTION
Resilient	They are able to face and overcome difficulties and challenges with wisdom, confidence, tolerance and empathy.
Communication skills	They express their thoughts, ideas and information confidently and creatively, verbally and in written form, using various media and technology.

PUPILS' PROFILE	DESCRIPTION
Thinker	They think critically, creatively and innovatively; able to overcome complex problems and make ethical decisions. They think about learning and themselves as pupils. They generate questions and are open to perspectives, values and individual's and societal traditions. They are confident and creative in handling new learning fields.
Teamwork	They can work effectively and harmoniously with others. They take responsibility while respecting and appreciating the contributions given by all team members. They obtain interpersonal skills through collaborative activities, and this makes them better leaders and team mates.
Curious	They develop natural curiosity to explore strategies and new ideas. They learn skills that are needed to carry out inquiry and research, as well as show independent attitudes in learning. They enjoy continuous lifelong learning experiences.
Principled	They are honest and have integrity, equality, are fair and respect individual, group and community dignity. They are responsible for their actions, consequences and decisions.
Informative	They gain knowledge and develop wide and balanced understanding across various knowledge disciplines. They explore knowledge effectively and efficiently in the context of local and global issues. They understand ethics/laws related to the information obtained.

PUPILS' PROFILE	DESCRIPTION
Caring/ Attentive	They show empathy, compassion and respect towards the needs and feelings of others. They are committed to serve the society and ensure the sustainability of nature.
Patriotic	They show love, support and respect towards the country.

### HIGHER ORDER THINKING SKILL

Higher Order Thinking Skills (HOTS) is stated explicitly in the curriculum so that the teachers can translate them in teaching and learning to stimulate structured and focused thinking among pupils. HOTS descriptions are focused on four levels of thinking as shown in **Table 3**.

**Table 3: Thinking levels in HOTS**

Thinking level	Description
<b>Application</b>	<ul style="list-style-type: none"> <li>Using knowledge, skills and values in different situations to accomplish a task.</li> </ul>
<b>Analysis</b>	<ul style="list-style-type: none"> <li>Breaking down information into smaller parts for in-depth understanding and making connections between these parts.</li> </ul>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>Considering and making decisions using knowledge, experience, skills, values and justifying decisions made.</li> </ul>
<b>Creation</b>	<ul style="list-style-type: none"> <li>Producing ideas or products or methods creatively and innovatively.</li> </ul>

HOTS is the ability to apply knowledge, skills and values in reasoning and reflecting to solve problems, make decisions, be innovative and capable of inventing something. HOTS include critical and creative thinking skills, reasoning and thinking strategies.

**Critical thinking** is the ability to evaluate ideas logically and rationally to make sensible judgements using logical reasons and evidence.

**Creative thinking** is the capacity to produce or create something new and valuable using genuine imagination and unconventional thinking.

**Reasoning skill** is the individual's capability to consider and evaluate logically and rationally.

**Thinking strategy** is a way of thinking that is structured and focused to solve problems.

HOTS can be applied in classrooms through reasoning based activities, inquiry learning, problem solving and projects. Teachers and pupils need to use thinking tools such as thinking maps and mind maps and higher level questions to encourage pupils to think.

## STRATEGIES IN TEACHING AND LEARNING

Mathematics is a knowledge based on concepts, facts, attitudes, rules, patterns and processes. Effective teaching and learning Mathematics requires teachers to plan activities meticulously and integrate various strategies that not only allow pupils to understand the contents in-depth yet challenge them to think on a higher level.

Opportunities and a variety of learning experiences, integrating the use of ICT, and problem solving that involve a balance of both routine and non-routine questions are also emphasized in the teaching and learning of Mathematics. Non-routine questions that require higher order thinking is emphasized to achieve the aim of producing human capital that are thoughtful, creative and innovative, able to compete in the era of globalization and able to meet challenges of the 21st century. Thus, teachers need to design teaching and learning that provides opportunities for pupils to make conjectures, do reasoning, ask questions, reflect and then form concepts and self-knowledge. Hence, structured questioning techniques are needed to enable pupils to discover rules, patterns or the nature of mathematical concepts.

Therefore, the strategies used in teaching and learning mathematics require diversity and balance. The use of technologies such as dynamic software, graphic calculators, internet and so on needs to be integrated in the teaching and learning of mathematics to help pupils develop in depth understanding of the concept, which mainly involves abstract concepts. However, traditional strategies are sometimes required when teaching procedure based on contents.

In addition, teachers need to use various approaches in teaching and learning such as mastery learning, contextual learning, project-based learning, problem-based learning, simulation, inquiry-discovery, modular approach and STEM approach. These approaches provide fun learning experiences in mathematics, meaningful, useful and challenging which, in turn, will form in depth understanding of concepts. Therefore, teachers need to choose suitable strategies of teaching and learning to meet the needs of pupils with diverse abilities, interests and preferences in meaningful and challenging activities designed specifically based on their needs.

### **Mastery Learning**

Mastery learning is learning that ensures all pupils master the learning objectives set. This learning adheres to the principle that each pupil is able to learn if given an opportunity. Opportunities should be given to the pupils to learn at their own pace. Enrichment and remedial action needs to be made as part of teaching and learning process.

### **Contextual Learning**

Contextual learning is learning that requires pupils to make connections with their lives. In this context, pupils do not only learn in theory, but can apply their knowledge of mathematics in daily life situations. Pupils can apply their diverse skills, experiences and local culture, thereafter integrate all these into new learning experiences.

### **Project-based Learning**

Project-based learning is learning that focuses on practical tasks in a systematic and well-planned time frame to investigate and explore a problem or produce a product.

Normally, it involves tasks that require data collection and data analysis activities, reporting the results of the project and self-reflection. The focus of learning is on the process whereby the product or end result of the project is the completion of learning.

### **Problem-based Learning**

Problem-based learning is learning that provides opportunities for pupils to learn through the exploration of daily life problems. Pupils will be able to develop resilience when they face and overcome challenges and difficulties through the process of interpreting problems, gathering information, identifying possible solutions, evaluating each problem solving and presenting the conclusions and decisions.

### **Simulation**

Simulation is learning that provides opportunities for pupils to learn through activities that resemble real life situations. Examples of simulation are role-play, games and the use of models. In role-play, pupils play a role spontaneously based on rules given. Pupils play to learn a concept or understand the process and make decisions. Models can be used to represent real objects or situations.

### **Inquiry-Discovery**

Inquiry-discovery is learning that uses the curiosity in pupils to explore a field of knowledge. This learning focuses on the expansion of skills and intellectuality to raise questions and find answers that arise from the curiosity of the pupils.

### Modular Approach

Modular approach is teaching and learning that is based on the pupil-centred principle with focuses on personal development, integration of skills, absorption of knowledge and values in subjects, presenting content in a linear or non-linear sequence, selecting and presenting content, flexibility of skills and values. Operation time is flexible in the implementation of teaching and learning, such as, flipped classroom and so on.

### STEM Approach (Science, Technology, Engineering and Mathematics )

STEM approach is teaching and learning that applies knowledge, skills and values of STEM through inquiry, problem solving or project in the context of daily life, environment and local as well as global community as shown in Figure 4.

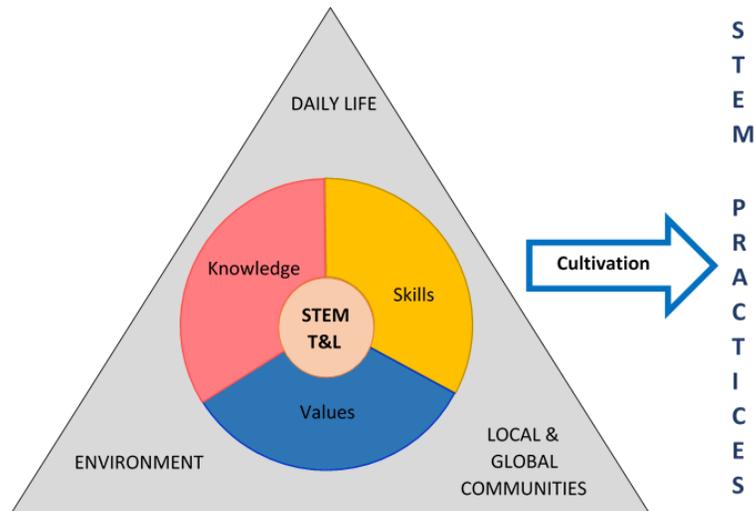

Figure 4: STEM Teaching and Learning Approach

STEM teaching and learning that is contextual and authentic is able to encourage in-depth learning among pupils. Pupils can work in groups or individually according to their abilities to acculturize the STEM approach as follows:

1. Questioning and identifying problems;
2. Developing and using models;
3. Planning and carrying out investigations,
4. Analyzing and interpreting data;
5. Using mathematical and computational thinking;
6. Developing explanation and designing solutions;
7. Engaging in debates and discussion based on evidence; and
8. Getting information, evaluating and communicating about the information.

### CROSS CURRICULAR ELEMENTS

Cross Curricular Elements (CCE) are value-added elements applied in the teaching and learning process other than those specified in the Content Standard. These elements are applied to strengthen the skills and competency of the intended human capital, capable of dealing with the current and future challenges. The elements in the CCE are as follow:

**1. Language**

- The medium of language used should be emphasized in all subjects.
- During the teaching and learning of each subject, the pronunciation, sentence structure, grammar and the terminology and register of the language need to be emphasized to assist pupils in organising ideas as well as communicating effectively.

**2. Environmental Sustainability**

- Awareness of the love to the environment in the pupils' lives should be nurtured through the teaching and learning in all subjects.
- Knowledge and awareness for the environment to develop pupils' ethics in appreciating nature.

**3. Values**

- Values are emphasised in all subjects to ensure that pupils are aware of its importance and practise them.
- Values include spirituality, humanity and nationality which are the practices in daily life.

**4. Science and Technology**

- The increased of the interest in science and technology can improve scientific and technological literacy among pupils.

- The use of technology in teaching can help and contribute to efficient and effective learning.
- The integration of Science and technology in the teaching and learning includes four areas:
  - i. The knowledge of science and technology (facts, principles, concepts related to science and technology);
  - ii. Scientific skills (thinking process and specific manipulative skills);
  - iii. Scientific attitudes (such as accuracy, honesty, security); and
  - iv. Use of technology in teaching and learning activities.

**5. Patriotism**

- Patriotism can be nurtured through all subjects, co-curricular activities and community services.
- Patriotism can produce pupils with the spirit of love towards country and pride as Malaysians.

**6. Creativity and Innovation**

- Creativity is the ability to use imagination in gathering, extracting and generating ideas or creating new or original ideas through inspiration or a combination of existing ideas.
- Innovation is the application of creativity through the modification, improvement and practice of ideas.

- Creativity and innovation are inter-connected and is needed to ensure that human capital development can meet the challenges of the 21st century.
- Elements of creativity and innovation should be integrated in teaching and learning.

### **7. Entrepreneurship**

- The instillation of entrepreneurship elements aims to develop attributes and entrepreneurial practices as a culture among the pupils.
- Entrepreneurial attributes can be instilled in teaching and learning through activities that could foster attitudes such as diligence, honesty, trustworthiness and responsibility as well as developing creative and innovative minds to spur ideas to the market.

### **8. Information and Communication Technology (ICT)**

- The incorporation of Information and communication technology elements in the teaching and learning is to ensure pupils can apply and strengthen their basic knowledge and skills in ICT.
- The application of ICT will not only motivate pupils to be creative but also stimulate interest and enjoyment as well as improve the quality of teaching and learning.

- ICT should be integrated according to the appropriate topics to be taught in order to enhance pupils' understanding of subject content.
- Computational thinking is one of the aspects that are emphasized in ICT which can be applied in all the subjects. Computational thinking is a skill that uses the concept of logic, algorithm, resolution, pattern recognition, scaling and assessment in the process of problem solving with the aid of computers.

### **9. Global Sustainability**

- Elements of Global Sustainability aim to develop pupils with sustainable thinking and responsive towards the environment in their daily lives with the application of knowledge, skills, and values acquired through the elements of the Sustainable Consumption and Production, Global Citizenship and Unity.
- Elements of Global Sustainability is important in preparing pupils to face challenges and current issues at the local, national and global levels.
- These elements are taught directly and indirectly in related subjects.

## 10. Finance Education

- The instillation of financial education elements aims to shape the future generation that is capable of making wise financial decisions, ethical financial management and the skills to manage the financial affairs responsibly.
- Elements of financial education can be instilled in teaching and learning directly or indirectly. Direct application is done through the topics that contain explicit financial elements such as the calculation of simple interest and compound interest. Indirect application is integrated through other topics across the curriculum. Exposure to financial management in real life is important to provide pupils with the knowledge, skills and values that can be applied effectively and meaningfully.

## CLASSROOM ASSESSMENT (CA)

Classroom Assessment (CA) is a process to obtain information on pupils' progress which is planned, carried out and reported by the teachers. This on-going process helps teachers to determine the level of pupils' achievement.

Classroom assessment can be carried out by teachers in form of formative and summative. Formative assessments are carried out in line with the process of teaching and learning, while summative assessment is carried out at the end of every learning unit, term, semester or year. Teachers need to plan, build items or instruments of assessment, administer, inspect, record and report the pupils' level of mastery based on Standard-Based Curriculum and Assessment Documents (DSKP).

In an effort to ensure that assessment helps to enhance pupils' ability and mastery, teachers should carry out assessment with the following characteristics:

- Use various methods of assessment such as observation, verbally and in writing.
- Use various strategies of assessment which can be carried out by teacher and pupils.
- Take into consideration various levels of knowledge and skills learnt.

- Enable pupils to show various learning abilities.
- Interpret the level of pupil's mastery on Learning Standard and Performance Standard
- Take follow up actions for remedial and enrichment.

Primary School Mathematics Assessment involves elements of content, process skills, as well as attitudes and values. Pupil's Assessment refers to Performance Standards criteria in the six performance levels that provide a specific interpretation. Assessment of Mathematics also can be reported using the reporting template designed and built to record pupil's achievement. At the end of each year, report of overall level of mastery achieved is recorded which includes the elements of content, skills and processes, as well as attitudes and values.

### Content

The content assessment is generally assessed topically. This assessment aims to overview the extent of pupil's understanding on the specific standard content comprehensively and holistically. This curriculum outlines the content standard which is organized according to specific learning areas. The topics listed are hierarchically arranged and shows the development according to the learning areas. Teachers need to assess the pupils holistically. Performance

Standard (*SPi*) for each topic is built based on General Performance Level as shown in Table 4.

**Table 4: General Interpretation of Performance Level of Mathematical Contents.**

PERFORMANCE LEVEL	DESCRIPTOR
1	Know basic knowledge of mathematics.
2	Know and understand the basic knowledge of mathematics.
3	Know and understand basic knowledge of mathematics to perform basic operations of mathematics and basic conversion.
4	Know and understand the basic knowledge of mathematics to perform calculation steps in solving daily routine problems.
5	Master and apply knowledge and skills of mathematics in solving daily routine problems using various strategies.
6	Master and apply knowledge and skills of mathematics in solving daily non-routine problems creatively and innovatively.

### Mathematics Skills and Processes

Elements of mathematical skills and processes should be displayed and practised by the pupils are assessed on an ongoing basis through various methods such as observation, exercise, presentation, pupil's oral responses, group work and so on. Achievement reports of these elements can be done in the middle of the year and at the end of the year to see the development of pupils and help them increase their skills.

In the Teaching and Learning process, the teacher should assess the mathematical skills together with the learning practices that are shown through mathematical process, which are problem solving, mathematical reasoning, communication, connection and representation. Performance level for mathematical skills are as shown in Table 5.

**Table 5 : Performance Level of Mathematics Skills Process**

PERFORMANCE LEVEL	DESCRIPTOR
1	Pupils will be able to state activity or mathematical ideas using representation, make connection, reasoning and communicate, and state the steps to solve mechanical problems with guidance.
2	Pupils will be able to explain activity or mathematical ideas using representation, make connection, reasoning and communicate, and solve mechanical problems with guidance.
3	Pupils will be able to carry out activities and mathematical ideas using representation, make connection, reasoning and communicate, and solve mechanical problems.
4	Pupils will be able to carry out activities and mathematical ideas using representation, make connection, reasoning and communicate, and solve routine problems.
5	Pupils will be able to carry out activities and mathematical ideas using representation, make connection, reasoning and communicate, and solve complex routine problems using various strategies.
6	Pupils will be able to carry out activities and mathematical ideas using representation, make connection, reasoning and communicate, and solve non-routine problems creatively and innovatively.

### Attitudes and values

Elements of attitudes and values that should be shown and practised by pupils are continuously assessed through various methods. Achievement reports of these elements can be done in the middle of the year and end of the year to see the development of the pupils and help them increase the good values as shown in Table 6.

**Table 6: General Interpretation of Performance Level of Attitude and Values**

PERFORMANCE LEVEL	DESCRIPTOR
1	State attitudes and values in mathematics with guidance.
2	Explain attitudes and values in mathematics by giving reasonable example.
3	Show attitude and values related to mathematics in a given situation.
4	Demonstrate attitude and values related to mathematics in various situation and become mentor to their peers.
5	Always practice attitude and values related to mathematics in teaching and learning process and become a mentor to their peers.
6	Always practice attitude and values related to mathematics in daily life and become a mentor and role model to their peers.

### Overall Performance Level

At the end of the school term, teachers should determine the overall performance level of pupils. The Overall Assessment includes knowledge, process skills and values. Teachers should assess pupils collectively and holistically through the learning process. Teacher should use professional consideration in all assessment process, especially to determine the overall performance level. Professional consideration can be done based on teacher's knowledge and experiences, teacher-pupils interaction as well as discussion with colleague. Teachers can refer to the guide as shown in Table 7 to determine the Overall Performance levels of pupils.

Table 7: Overall Performance Level

PERFORMANCE LEVEL	DESCRIPTOR
1	<ul style="list-style-type: none"> <li>• Review the basic knowledge of mathematics.</li> <li>• Use mathematical process skills to review the basic knowledge of mathematics with guidance.</li> <li>• State attitudes and values in mathematics with guidance.</li> </ul>
2	<ul style="list-style-type: none"> <li>• Explain basic knowledge of mathematics.</li> <li>• Use mathematical process skills to explain basic knowledge of mathematics.</li> <li>• Explain attitudes and values in mathematics by giving reasonable examples.</li> </ul>
3	<ul style="list-style-type: none"> <li>• Apply basic knowledge of mathematics.</li> <li>• Use mathematical process skills to apply basic knowledge of mathematics.</li> <li>• Show attitudes and values in mathematics for various situations.</li> </ul>
4	<ul style="list-style-type: none"> <li>• Solve routine problems in daily life.</li> <li>• Use mathematical process skills to solve routine problems.</li> <li>• Demonstrate attitudes and values related to mathematics in various situations and become a mentor to peers.</li> </ul>
5	<ul style="list-style-type: none"> <li>• Solve complex routine problems in daily life using various strategies of problem solving.</li> <li>• Use mathematical process skills to solve complex routine problems.</li> <li>• Always practise attitude and values related to mathematics in teaching and learning process and become a mentor to peers.</li> </ul>
6	<ul style="list-style-type: none"> <li>• Solve non-routine problems in daily life.</li> <li>• Use mathematical process skills to solve non-routine problems.</li> <li>• Always practise attitudes and values related to mathematics in daily life and become a mentor as well as role model to peers.</li> </ul>

### Classroom Assessment Report

Assessment is a process used to determine learning achievement. This achievement is recorded in a report template that can be downloaded from BPK website. The process of recording pupils' achievement is carried out based on Performance Level as described in the Standard-Based Curriculum and Assessment Documents (DSKP).

Classroom assessment template shows the process of delivering information on pupils learning and achievement from time to time. The report includes the progress and development of pupils from aspects of knowledge, skills and process as well as values as aspired in the curriculum.

### CONTENT ORGANISATION

Mathematics Standard-Based Curriculum for Primary School is designed with the emphasis on Content Standard and Learning Standard that needs to be known and can be done by pupils. The standards are presented by the topics that are incorporated based on learning areas. The level of pupil's learning development is measured by the Performance Standard and is organized according to each topic.

The content of Standard-Based Curriculum and Assessment Documents for Primary School Mathematics is based on learning areas as shown in Table 8.

**Table 8: List of Topics According to Learning Area in Primary School Mathematics**

LEARNING AREA	TOPIC
Numbers and Operations	<ul style="list-style-type: none"> <li>• Whole Numbers and Basic Operations</li> <li>• Fractions, Decimals and Percentage</li> <li>• Money</li> </ul>
Measurement and Geometry	<ul style="list-style-type: none"> <li>• Time</li> <li>• Measurement</li> <li>• Space</li> </ul>
Relationship and Algebra	<ul style="list-style-type: none"> <li>• Coordinate, ratio and proportion</li> </ul>
Statistics and Probability	<ul style="list-style-type: none"> <li>• Data Handling</li> <li>• Likelihood</li> </ul>
Discrete Mathematics	<ul style="list-style-type: none"> <li>• Not at primary level</li> </ul>

Mathematics Standard-Based Curriculum for Primary School focuses on the mastery of knowledge, processing skills and values that are suitable with the pupil's abilities. The minimum time provision for mathematics level II is 96 hours per year. Mathematics Standard-Based Curriculum and Assessment Documents are organised through a statement of Content Standard, Learning Standard and Performance Standard, while the description column is attached with the suggested activities or notes as shown in Table 9.

The objective of each topic is explicated as a guide to prepare activities and learning environment which is appropriate and relevant to the ability and the needs of pupils. Teachers need to use creativity and their professional wisdom to achieve the objectives. The suggested activities are not absolute. Teachers are recommended to use a variety of resources such as modules, books and the internet to prepare suitable teaching and learning activities.

**Table 9: Interpretation of Content Standard, Learning Standard and Performance Standard**

CONTENT STANDARD	LEARNING STANDARD	PERFORMANCE STANDARD
Specific statements about what pupils should know and can do within a schooling period that include aspects of knowledge, skills and values.	A specification of criteria or indicators on the quality of learning and achievement that can be measured for each content standard.	A set of general criteria that shows the levels of performance that pupils need to show as an indicator to determine that they have mastered the aspects.

In the Organisation of Content, there is description column. The column consists of suggested activities and notes. Teacher can carry out additional activities apart from the suggested activities, based on their creativity and needs to achieve Learning Standard.

**LEARNING AREA**  
**NUMBERS AND OPERATIONS**

## TOPIC

# 1.0 WHOLE NUMBERS AND BASIC OPERATIONS

### **Objectives:**

Enable pupils to:

- Understand and apply whole numbers up to 100 000.
- Use correct mathematical terms related to whole numbers and in the basic operations processes.
- Understand and apply concepts and procedural skills of basic operations.
- Use mathematical knowledge and skills to solve problems related to whole numbers and basic operations up to 100 000.
- Develop mathematical reasoning, make connection, make representation, communicate and use technology while learning whole numbers and basic operations up to 100 000.

## 1.0 WHOLE NUMBERS AND BASIC OPERATIONS

CONTENT STANDARD	LEARNING STANDARD	REMARKS
1.1 Number value	Pupils will be able to: 1.1.1 State numbers up to 100 000: (i) Read any number given in words. (ii) Say any number given in numerals. (iii) Write numbers in numerals and words.  1.1.2 Determine the value of numbers up to 100 000: (i) State the place value and digit value of any number. (ii) Write numbers in extended notation based on place value and digit value. (iii) Compare the value of two numbers. (iv) Arrange numbers in ascending and descending order. (v) Complete any number sequence in ascending and descending order.	Notes: Say the number correctly. 12 425 is read as ‘twelve thousand four hundred and twenty-five’ and not ‘one two four two five’. Numbers can also be said as follows: 4 500 said as forty-five hundreds.  Suggested activities: <ul style="list-style-type: none"> <li>• Use various representations including concrete models, manipulative tools, square grids, diagrams/pictures, sounds, movement signals, number lines and symbols to represent numbers.</li> <li>• Use ICT to state and determine the number value.</li> </ul>
1.2 Odd numbers and even numbers	1.2.1 Characterise odd numbers and even numbers. 1.2.2 Classify odd numbers and even numbers.	Suggested activities: <ul style="list-style-type: none"> <li>• Use thinking tools.</li> <li>• Use ICT to identify odd numbers and even numbers.</li> </ul>
1.3 Estimate	1.3.1 Give reasonable estimates for the quantity based on the given reference set and justify the answers.	Suggested activity: Use real objects and diagrams/ pictures.
1.4 Round off numbers	1.4.1 Round off whole numbers to the nearest ten thousands.	Notes: i. Identify the number that might represent a number which has been rounded off to the nearest ten thousands. ii. Rounding off activities can include money and measurements.  Suggested activity: Use number lines.

CONTENT STANDARD	LEARNING STANDARD	REMARKS
1.5 Number patterns	1.5.1 Identify patterns of number series in ascending and descending order by ones up to tens, hundreds, thousands and ten thousands. 1.5.2 Complete various number patterns of number series in ascending and descending order by ones up to tens, hundreds, thousands and ten thousands.	Notes: The number series can be up to six numbers.  Suggested activity: Can use various calculation tools to create number patterns.
1.6 Basic operations within 100 000	1.6.1 Solve addition number sentences involving up to four numbers with the sum within 100 000. 1.6.2 Solve subtraction number sentences involving two numbers within 100 000. 1.6.3 Solve subtraction number sentences involving two numbers from any one number within 100 000. 1.6.4 Solve multiplication number sentences involving any number up to five digits by up to two-digit numbers, 100 and 1000 with the product up to 100 000. 1.6.5 Solve division number sentences involving any number within 100 000 by up to two-digit numbers, 100 and 1000.	Suggested activities: <ul style="list-style-type: none"> <li>• Addition involving numbers up to five digits.</li> <li>• Use concrete models, diagrams/pictures, number lines and mental calculation to represent the calculation process.</li> </ul>
1.7 Mixed operations	1.7.1 Solve mixed operations number sentences involving addition and subtraction within 100 000. 1.7.2 Solve mixed operations number sentences involving multiplication and division within 100 000.	Notes: Begin mixed operations of addition and subtraction without regrouping.

CONTENT STANDARD	LEARNING STANDARD	REMARKS
1.8 Usage of unknown	1.8.1 Determine the value of unknown in addition number sentences involving two numbers up to two digits with one unknown. 1.8.2 Determine the value of unknown in subtraction number sentences involving two numbers up to two digits with one unknown.	Notes: Unknown represented by letters. Begin with smaller numbers.
1.9 Problem solving	1.9.1 Solve problems of whole numbers, mixed operations involving addition and subtraction, and mixed operations involving multiplication and division within 100 000 in daily situations. 1.9.2 Solve problems involving addition and subtraction with one unknown in daily situations.	Suggested activities: Use the following problem solving steps: <ul style="list-style-type: none"> <li>• Understand the problem.</li> <li>• Plan a solving strategy.</li> <li>• Carry out the strategy.</li> <li>• Check the answer.</li> </ul> Use various problem solving strategies such as drawing diagrams, identifying patterns and trying simpler cases.  Use various teaching and learning strategies such as contextual learning and mastery learning.

PERFORMANCE STANDARD	
PERFORMANCE LEVEL	DESCRIPTOR
1	<ul style="list-style-type: none"> <li>State any number up to 100 000.</li> <li>Read number sentences involving basic operations and mixed operations.</li> </ul>
2	<ul style="list-style-type: none"> <li>Explain the value of numbers up to 100 000.</li> <li>Explain the steps of solving basic operations and mixed operations.</li> </ul>
3	<ul style="list-style-type: none"> <li>Determine the value of numbers including estimating and rounding off numbers up to 100 000.</li> <li>Justify answers and solve number sentences involving basic operations and mixed operations.</li> <li>Justify answers and solve number sentences involving value of unknown in addition and subtraction.</li> </ul>
4	Solve daily routine problems involving whole numbers, addition and subtraction up to 100 000 with one unknown.
5	Solve daily routine problems involving whole numbers, addition and subtraction up to 100 000 using various strategies.
6	Solve daily non-routine problems involving whole numbers, addition and subtraction up to 100 000 creatively and innovatively.

## TOPIC

# 2.0 FRACTIONS, DECIMALS AND PERCENTAGES

### Objectives

Enable pupils to:

- Make connections among fractions, decimals and percentages in daily life.
- Use mathematical knowledge and skills to solve problems involving fractions, decimals and percentages.
- Develop mathematical reasoning, make connection, make representation, explore, communicate and use technology to understand the concepts of fractions, decimals and percentages.

## 2.0 FRACTIONS, DECIMALS AND PERCENTAGES

CONTENT STANDARD	LEARNING STANDARD	REMARKS
2.1 Fractions	Pupils will be able to: 2.1.1 Convert improper fractions to mixed numbers and vice versa. 2.1.2 Add up to three numbers involving proper fractions, whole numbers and mixed numbers. 2.1.3 Subtraction of fractions: (i) Subtract any two numbers involving whole numbers, proper fractions and mixed numbers. (ii) Subtract any two numbers from one number involving whole numbers, proper fractions and mixed numbers. 2.1.4 Solve mixed operations of addition and subtraction involving whole numbers, proper fractions and mixed numbers. 2.1.5 Determine the value of proper fractions and mixed numbers of a quantity.	Suggested activity: Use concrete objects, diagrams/pictures and software. Notes: Denominator of the sum can be more than 10. Suggested activity: Use concrete objects, diagrams/pictures and software. Denominator of the difference can be more than 10. Notes: Emphasise the concept 'of' in the context of fractions. Suggested activity: Use concrete objects, diagrams/pictures, number line and software.

CONTENT STANDARD	LEARNING STANDARD	REMARKS
2.2 Decimals	2.2.1 Add up to three decimals up to three decimal places. 2.2.2 Subtract up to two decimals from one decimal up to three decimal places. 2.2.3 Multiply decimals by one-digit number, 10, 100 and 1000 with the product up to three decimal places. 2.2.4 Divide decimals by one-digit number, 10, 100 and 1000, and the quotient up to three decimal places.	Suggested activity: Use concrete objects, diagrams/pictures, number lines and software.
2.3 Percentages	2.3.1 Convert fractions to percentages and vice versa. 2.3.2 Calculate percentages of quantity of objects.	Notes: Use various strategies.  Suggested activity: Use hundred grid.
2.4 Problem solving	2.4.1 Solve problems involving fractions, decimals and percentages.	Suggested activities: Use the following problem solving steps: <ul style="list-style-type: none"> <li>• Understand the problem.</li> <li>• Plan a solving strategy.</li> <li>• Carry out the strategy.</li> <li>• Check the answer.</li> </ul> Use various problem solving strategies such as drawing diagrams, making tables/charts or listing systematically.

PERFORMANCE STANDARD	
PERFORMANCE LEVEL	DESCRIPTOR
1	State improper fractions and mixed numbers.
2	Convert improper fractions to mixed numbers and vice versa.
3	Solve number sentences of mixed operations of addition and subtraction involving whole numbers, proper fractions and mixed numbers.
4	Solve routine problems involving fractions, decimals and percentages.
5	Solve routine problems involving fractions, decimals and percentages using various strategies.
6	Solve non-routine problems involving fractions, decimals and percentages creatively and innovatively.

## TOPIC

# 3.0 MONEY

### **Objectives**

Enable pupils to:

- Apply the usage of money in daily life.
- Apply financial education in daily life.
- Make mathematical reasoning and conduct exploration in daily life for future benefits.
- Communicate, make connection and solve problems involving finance.
- Develop the entrepreneurship characteristics and entrepreneurship practises.

## 3.0 MONEY

CONTENT STANDARD	LEARNING STANDARD	REMARKS
3.1 Basic operations involving money	Pupils will be able to: 3.1.1 Solve addition number sentences involving up to three values of money with the sum up to RM100 000. 3.1.2 Solve subtraction number sentences involving up to two values of money from one value of money within RM100 000. 3.1.3 Solve multiplication number sentences involving value of money multiplied by up to two-digit numbers with the product up to RM100 000. 3.1.4 Solve division number sentences involving value of money within RM100 000 divided by up to two-digit numbers.	Suggested activities: Use money model, pictures, number lines, software and mental calculation to represent calculation of money.  Use simulation strategy.
3.2 Mixed operations involving money	3.2.1 Solve number sentences of mixed operations involving addition and subtraction of money within RM100 000. 3.2.2 Solve number sentences of mixed operations involving multiplication and division of money within RM100 000.	Suggested activity: Use money model, pictures, number lines, software and mental calculation to represent calculation of mixed operations.
3.3 Financial management	3.3.1 Plan daily, weekly and monthly budget to achieve short-term financial target. 3.3.2 Record savings and expenses to achieve financial target. 3.3.3 Explain the need for keeping records on savings and expenses.	Notes: Explain various ways of saving money. Use Savings and Expenditure Record Table.

CONTENT STANDARD	LEARNING STANDARD	REMARKS
3.4 Responsibility in making financial decisions	3.4.1 Explain effect of making financial decisions. 3.4.2 Make financial decisions based on priority of needs and wants. 3.4.3 Make financial decisions by analysing financial information obtained from various sources.	Notes: Characterise responsible pupils making responsible financial decisions.
3.5 Foreign currency	3.5.1 Recognise currency of main countries in the world. 3.5.2 State the value of RM1 in the current rate currency of other countries.	Notes: Foreign currency exchange rate equivalent to value of RM1 only.
3.6 Payment instruments	3.6.1 Recognise various payment instruments. 3.6.2 Explain the usage of various payment instruments in goods and service transactions.	Suggested activity: Introduce payment instruments such as cash, e-payment and cards.
3.7 Problem solving	3.7.1 Solve problems of basic operations and mixed operations within RM100 000 in daily life situations.	Suggested activities: Use the following problem solving steps: <ul style="list-style-type: none"> <li>• Understand the problem.</li> <li>• Plan a solving strategy.</li> <li>• Carry out the strategy.</li> <li>• Check the answer.</li> </ul> Use various problem solving strategies such as trying a simpler case and 'trial and error'.  Use various teaching and learning strategies such as simulation, mastery learning, contextual learning and project-based learning.

PERFORMANCE STANDARD	
PERFORMANCE LEVEL	DESCRIPTOR
1	<ul style="list-style-type: none"><li>• Recognise currency of major countries in the world.</li><li>• State the value of RM1 in the current rate currency of other countries.</li></ul>
2	Explain the need to record savings and expenditure.
3	Justify answers and solve number sentences of basic operations and mixed operations involving money.
4	Solve daily routine problems involving money.
5	Solve daily routine problems involving money using various strategies.
6	Solve daily non-routine problems involving money creatively and innovatively.

**LEARNING AREA**

**MEASUREMENT AND GEOMETRY**

## TOPIC

# 4.0 TIME

### **Objectives**

Enable pupils to:

- Use time effectively in daily life.
- Apply mathematical knowledge and skills to solve problems related to time.
- Develop mathematical reasoning, make connection, make representation, and use technology to understand the concept of time.
- Communicate, generate ideas and convey situations related to time clearly.

## 4.0 TIME

CONTENT STANDARD	LEARNING STANDARD	REMARKS
4.1 12-hour system and 24-hour system	Pupils will be able to: 4.1.1 Know the relationship between 12-hour system and 24-hour system.	Notes: Reinforce 12-hour system and introduce 24-hour system.
4.2 Duration	4.2.1 Determine duration involving hours and minutes within 24 hours.	Suggested activity: Use time line.
4.3 Estimation of time	4.3.1 Give an estimation of time in hours and minutes based on the given reference set related to daily situation.	Notes: Estimated time must be proven with real time.
4.4 Relationship involving units of time	4.4.1 State the relationship between millennium, centuries, decades and years. 4.4.2 Convert units of time involving: (i) hours and days, (ii) days and weeks, (iii) months and years, (iv) years, decades and centuries.	
4.5 Basic operations involving time	4.5.1 Solve addition and subtraction number sentences up to three units of time: (i) hours and days, (ii) days and weeks, (iii) months and years, (iv) years, decades and centuries. 4.5.2 Solve multiplication and division number sentences involving units of time: (i) hours and days, (ii) days and weeks, (iii) months and years, (iv) years and decades, (v) years and centuries up to two-digit number.	Suggested activity: Use clock model, calendar, diagrams/pictures and time line.

CONTENT STANDARD	LEARNING STANDARD	REMARKS
4.6 Problem solving	4.6.1 Solve problems involving time in daily situations.	<p>Suggested activities: Use the following problem solving steps:</p> <ul style="list-style-type: none"><li>• Understand the problem.</li><li>• Plan a solving strategy.</li><li>• Carry out the strategy.</li><li>• Check the answer.</li></ul> <p>Use various problem solving strategies such as trying a simpler case, drawing diagrams or working backwards.</p> <p>Use various teaching and learning strategies such as simulations and modular approaches.</p>

PERFORMANCE STANDARD	
PERFORMANCE LEVEL	DESCRIPTOR
1	State the relationship between units of time.
2	Explain the steps of solving number sentences involving units of time.
3	Justify answer and solve the number sentences involving time.
4	Solve daily routine problems involving time.
5	Solve daily routine problems involving time using various strategies.
6	Solve daily non-routine problems involving time creatively and innovatively.

**TOPIC**  
**5.0 MEASUREMENT**

**Objectives**

Enable pupils to:

- Use various concrete materials to build understanding of the concepts and apply mathematical knowledge in daily life.
- Apply mathematical knowledge and skills to solve problems involving measurement.
- Develop mathematical reasoning, make connection, make representation, explore, communicate and use technology to understand the concept of measurement.

## 5.0 MEASUREMENT

CONTENT STANDARD	LEARNING STANDARD	REMARKS
5.1 Length	Pupils will be able to: 5.1.1 Recognise units of length involving millimetre and kilometre. 5.1.2 State the relationship between units of length involving millimetre and centimetre, and metre and kilometre. 5.1.3 Convert units of length involving millimetre and centimetre, and metre and kilometre. 5.1.4 Measure objects in millimetre. 5.1.5 Estimate distance in kilometre. 5.1.6 Solve addition number sentences up to three units of length involving millimetre and centimetre, and metre and kilometre. 5.1.7 Solve subtraction number sentences up to two units of length from one unit of length involving millimetre and centimetre, and metre and kilometre. 5.1.8 Solve multiplication number sentences involving unit of length and one-digit number involving millimetre, centimetre, metre and kilometre. 5.1.9 Solve division number sentences involving unit of length and one-digit number involving millimetre, centimetre, metre and kilometre.	Notes: Write the unit of length given in millimetre and kilometre using mm and km symbols.  Introduce units of length in metric system of measurements: <ul style="list-style-type: none"> <li>• decimetre (dm)</li> <li>• decametre (dam)</li> </ul> Introduce units of length in the imperial system of measurements: <ul style="list-style-type: none"> <li>• inch</li> <li>• foot</li> <li>• yard</li> <li>• mile</li> </ul> Reinforce the relationship of centimetre and metre.  Suggested activities: Use actual objects and software in converting units of length. Use various calculation strategies in solving number sentences.

CONTENT STANDARD	LEARNING STANDARD	REMARKS
5.2 Mass	5.2.1 Solve mixed operations number sentences of addition and subtraction of mass involving gram and kilogram. 5.2.2 Solve mixed operations number sentences of multiplication and division of mass involving gram and kilogram.	Notes: Introduce units of mass in metric system of measurements: <ul style="list-style-type: none"> <li>• milligram (mg)</li> <li>• tonne (t)</li> </ul> Introduce units of mass in the imperial system of measurements: <ul style="list-style-type: none"> <li>• pound (lb)</li> <li>• ounce (oz)</li> </ul> Introduce other units of mass: <ul style="list-style-type: none"> <li>• tael</li> <li>• catty</li> </ul>
5.3 Volume of liquid	5.3.1 Solve mixed operations number sentences of addition and subtraction of volume of liquid involving millilitre and litre. 5.3.2 Solve mixed operations number sentences of multiplication and division of volume of liquid involving millilitre and litre.	Notes: Introduce units of volume of liquid in the imperial system of measurements: <ul style="list-style-type: none"> <li>• gallon (gal)</li> <li>• quart (qt)</li> <li>• pint (pt)</li> </ul>
5.4 Problem solving	5.4.1 Solve problems involving measurement in daily situations.	Suggested activities: Use the following problem solving steps: <ul style="list-style-type: none"> <li>• Understand the problem.</li> <li>• Plan a solving strategy.</li> <li>• Carry out the strategy.</li> <li>• Check the answer.</li> </ul> Use various problem solving strategies such as logical reasoning and identifying patterns.  Use various teaching and learning strategies such as simulations, STEM approach and modular approach.

PERFORMANCE STANDARD	
PERFORMANCE LEVEL	DESCRIPTOR
1	State the relationship between millilitre and centimetre, centimetre and metre, metre and kilometre, gram and kilogram, and millilitre and litre.
2	Explain units for length, mass and volume of liquid in measurement.
3	Justify answer and solve the number sentences involving measurement.
4	Solve daily routine problems involving measurement.
5	Solve daily routine problems involving measurement using various strategies.
6	Solve daily non-routine problems involving measurement creatively and innovatively.

## TOPIC

# 6.0 SPACE

### Objectives

Enable pupils to:

- Apply mathematical knowledge and skills in solving problems involving space.
- Appreciate and value the beauty of mathematics in various shapes generated from polygons.
- Develop mathematical reasoning, make connection, make representation, communicate and use technology to solve problems involving spaces.

## 6.0 SPACE

CONTENT STANDARD	LEARNING STANDARD	REMARKS
6.1 Angles	Pupils will be able to: 6.1.1 Recognise and name right angle, acute angle and obtuse angle in rectangle, square and triangle.	Notes: Introduce scalene triangle, isosceles triangle, equilateral triangle and right angle triangle.
6.2 Parallel lines and perpendicular lines	6.2.1 Recognize and name the parallel lines and perpendicular lines. 6.2.2 Draw parallel lines and perpendicular lines.	Suggested activity: Determine the parallel lines and perpendicular lines from concrete materials (surrounding), two-dimensional shapes and drawings.
6.3 Perimeter and area	6.3.1 Determine the perimeter of polygon up to eight sides. 6.3.2 Determine the area of square, rectangle, right angle triangle, equilateral triangle and isosceles triangle using square grids of 1 square unit and formula.	Suggested activity: Carry out outdoor activities.
6.4 Volume of a solid	6.4.1 Determine the volume of cube and cuboid using 1 cubic unit cube and formula.	Suggested activity: Construct cubes and cuboids of various sizes to estimate the volume of an object.
6.5 Problem solving	6.5.1 Solve problems involving space.	Suggested activity: Use various problem solving strategies such as diagrams, models and actual objects.

PERFORMANCE STANDARD	
PERFORMANCE LEVEL	DESCRIPTOR
1	<ul style="list-style-type: none"><li>• Recognise and name angles for rectangle, square and triangle.</li><li>• Identify parallel lines and perpendicular lines.</li></ul>
2	<ul style="list-style-type: none"><li>• State the characteristics of parallel lines and perpendicular lines.</li><li>• State the meaning of perimeter, area and volume using formula.</li></ul>
3	<ul style="list-style-type: none"><li>• Draw parallel lines and perpendicular lines.</li><li>• Calculate perimeter of polygons, area and volume.</li></ul>
4	Solve daily routine problems involving space.
5	Solve daily routine problems involving space using various strategies.
6	Solve daily non-routine problems involving space creatively and innovatively.

# **RELATIONSHIP AND ALGEBRA**

## TOPIC

# 7.0 COORDINATES, RATIO AND PROPORTION

### Objectives

Enable pupils to:

- Use mathematical knowledge and skills to solve problems related to coordinates, ratio and proportion.
- Appreciate and value the beauty of mathematics.
- Make decision and generate idea to explain the daily life situations related to coordinates, ratio and proportion.
- Develop mathematical reasoning, make connection, make representation, communicate and use technology to understand the concept and application of coordinates, ratio and proportion.

## 7.0 COORDINATES, RATIO AND PROPORTION

CONTENT STANDARD	LEARNING STANDARD	REMARKS
7.1 Coordinates in the first quadrant	Pupils will be able to: 7.1.1 Recognise x-axis, y-axis and origin (O). 7.1.2 Determine the coordinates of a point in the first quadrant and vice versa.	Notes: Emphasise the notation in writing coordinates as $(x, y)$ and coordinates of origin as $(0, 0)$ .  Suggested activity: Use simulation strategy to name the object and determine the coordinates.
7.2 Ratio	7.2.1 Represent the relationship between two quantities based on the ratio 1:1 up to 1:10, 1:100 and 1:1000.	Notes: Emphasise the proper way of writing ratio. Emphasise the concept of ratio involving daily situations(surrounding).  Suggested activity: Use concrete materials to represent ratios.
7.3 Proportion	7.3.1 Determine an unknown value using unitary method.	Notes: Explain the meaning of proportion.  Suggested activity: Use project-based learning.
7.4 Problem solving	7.4.1 Solve problems involving coordinate, ratio and proportions in daily situations.	Suggested activity: Use various problem solving strategies such as analogy, drawing diagrams, simulation and contextual learning.

PERFORMANCE STANDARD	
PERFORMANCE LEVEL	DESCRIPTOR
1	State: <ul style="list-style-type: none"> <li>• <math>x</math>-axis, <math>y</math>-axis and origin.</li> <li>• Notation and meaning of unitary.</li> </ul>
2	Explain the steps to: <ul style="list-style-type: none"> <li>• Read the coordinates of a point and mark the point of the coordinates in the first quadrant.</li> <li>• Determine the value based on the ratio given.</li> <li>• Compare the value of one unit.</li> </ul>
3	<ul style="list-style-type: none"> <li>• Read the coordinates of a point and mark the point of the coordinates in the first quadrant.</li> <li>• Determine a value based on the ratio given.</li> <li>• Find the value using unitary methods.</li> </ul>
4	Solve daily routine problems involving coordinates, ratio and unitary methods.
5	Solve daily routine problems involving coordinates, ratio and unitary methods using various strategies.
6	Solve daily non-routine problems involving coordinates, ratio and unitary methods creatively and innovatively.

**LEARNING AREA**  
**STATISTICS AND PROBABILITY**

**TOPIC**  
**8.0 DATA HANDLING**

**Objectives**

Enable pupils to:

- Acquire the skills in obtaining information from pictographs and bar charts.
- Apply mathematical knowledge and skills in solving problems involving data handling.
- Make decisions and generate ideas to explain situations faced in daily life.
- Develop mathematical reasoning, make connection, make representation, communicate and use technology to understand the concept and application of data handling.

## 8.0 DATA HANDLING

CONTENT STANDARD	LEARNING STANDARD	REMARKS
8.1 Pictographs and bar charts	Pupils will be able to: 8.1.1 Construct pictographs and bar charts of ungrouped data. 8.1.2 Interpret the pictographs and bar charts constructed.	Notes: Emphasise the correct way of constructing a bar chart.  Suggested activity: Use various methods in constructing pictographs and bar charts including using software.
8.2 Problem solving	8.2.1 Solve problems involving data handling in daily situations.	Suggested activities: Use the following problem solving steps: <ul style="list-style-type: none"> <li>• Understand the problem.</li> <li>• Plan a solving strategy.</li> <li>• Carry out the strategy.</li> <li>• Check the answer.</li> </ul> Use various problem solving strategies such as making a table/chart or listing systematically and drawing diagrams.  Use various teaching and learning strategies such as STEM approach and project-based learning.

PERFORMANCE STANDARD	
PERFORMANCE LEVEL	DESCRIPTOR
1	Read information from pictographs and bar charts.
2	Explain the steps to construct pictographs and bar charts.
3	<ul style="list-style-type: none"><li>• Construct pictographs and bar charts.</li><li>• Interpret data from pictographs and bar charts.</li></ul>
4	Solve daily routine problems involving pictographs and bar charts.
5	Solve daily routine problems involving pictographs and bar charts using various strategies.
6	Solve daily non-routine problems involving pictographs and bar charts creatively and innovatively.
